

## Who We Are?

Stanian Consulting is a specialist consultancy in the ICT Strategy area. Our team is made up of dedicated, life-long ICT industry professionals and subject matter experts with a passion for making a difference and improving your business and your bottom line performance.

## What We Do?

Help you solve those nasty, difficult, intractable problems which cost you money, put your operational efficiency and effectiveness at risk and jeopardise business outcomes based on key decisions taken. We help clients address key issues surrounding cost, risk, governance and compliance through three key lenses of people/organization, process and technology.

### Your current dilemma could be that you need to:

- develop a new ICT (information Communications Technology) strategy and business vision
- align your business strategy to ICT implementation
- assess your ICT technical architecture
- control ICT investment spend with strong controls, alignment and business cases
- develop a formal set of metrics for managing your business e.g. Key Performance Indicators
- estimate the projected size, risk, complexity and cost, duration and timescale for your proposed ICT project?
- establish who is the most appropriate vendor and whether they can really live up to their promises
- integrate a new ICT system into your existing business application estate
- decide your chosen vendor and product solution for a key product, application, infrastructure or service through a completely independent, objective, impartial, and transparent evaluation and selection review. You will need to live with such decisions for many years so it is imperative to get them right first time, every time and have peace of mind that the best fit is selected
- ensure that the ICT outsourcing decisions around strategy, evaluation, contracts and ongoing maintenance and conducted in an appropriate

manner – such decisions are fundamental to business operations – mitigate the risk before you sign on the dotted line

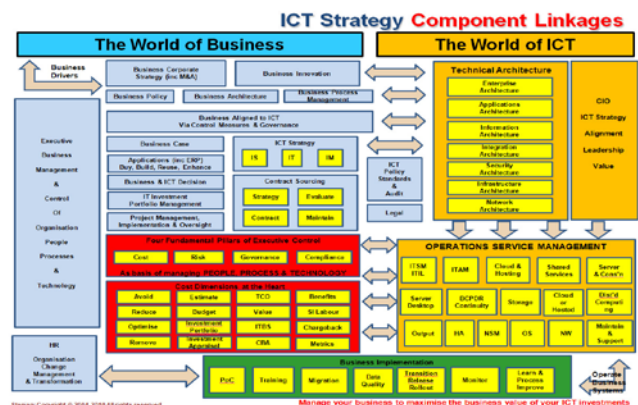

- ensure you manage the business change aspects of new systems implementation and rollout. It is people issues that kill most projects not the ICT and infrastructure they run on
- improve service management through service delivery and service support – your ICT is as good as the way the business perceives it – measure manage, control, and review are essential to improvement

## How We Do It?

We follow a consultative and collaborative approach to work with your key management team to achieve measurable benefits and improvements to your bottom line, resolving those key challenges that make a difference to your business.

We utilize a structured methodology, a defined step-by-step process and approach, and a component framework underpinned by extensive academic, business research, industry standards and grounded in real-world experience, undertaken by subject matter experts.

Our USP (unique selling proposition) is represented below:
